

INVESTING IN SUSTAINABILITY

ACS has been fully offsetting its carbon emissions since 2022, by investing in **Gold Standard Sustainable Investment Programmes**, which distributes cookstoves to local CO2 emissions across Africa.

ACS also partners **JustdiggIt** to regreen degraded land in Rombo, Kenya. **JustdiggIt** uses regenerative agricultural practices to reverse desertification on the African continent. ACS has donated funds to regreen up to 1.355.300 m2 (the equivalent of 190 football fields) of degraded land in Kenya since 2022.

On behalf of EHA, ACS allocates 25,000m2 of land (in addition to 25,000m2 in 2023)

to be dug to harvest rainwater and start regenerating the soil, which benefits the community, the environment and ultimately the planet.
