[Spring meeting of the Slovenian Association of Hematologists, the Slovenian Association for Transfusion Medicine, the Section of Nurses and Health Technicians in Hematology and the Hematology Laboratory Association 12-13.4.2024](#)

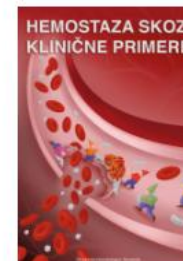

[Autumn meeting of the Slovenian Association of Hematologists. 19.10.2024 Hotel Four Points by Sheraton Mons, Ljubljana](#)

The manual briefly attempts to explain the approach to reading a blood count and its importance in identifying various blood diseases and other medical conditions. Each explanation is accompanied by an example of a blood count from clinical practice.

The manual describes emergency conditions in the field of hematology that every physician should be aware of. Through anamnesis and basic laboratory tests, the most common conditions and emergency initial treatment are presented.

The book presents normal hemostasis and the most common congenital and acquired hemostatic disorders in a reader-friendly manner. The book presents the material based on clinical cases from everyday practice.

The booklet presents the most common problems with which patients come to see their family medicine doctor and other specialists after a hematopoietic stem cell transplant.
